

Steganos Privacy Suite 21 provides better performance and clarity for privacy and data protection

Berlin, 29 August 2019 - Berlin-based software provider Steganos (www.steganos.com), which specialises in data protection and digital privacy, has announced the release of the brand new Privacy Suite 21. From today, users will have access to an easy-to-use, complete solution comprising the individually available security programs Steganos Safe 21 and Steganos Password Manager 21. The new product offers extremely accelerated cloud synchronisation and Mobile Privacy performance. A range of interface designs, easier safe creation, improvements to the Portable Safe and new optional list views contribute to a much improved overview. File attachments can be synchronised between multiple computers.

Major new features and improvements in Steganos Privacy Suite 21:

- Choice of different new interface designs
- Extreme acceleration of cloud synchronisation and Mobile Privacy
- More at a glance with new optional list views
- Synchronisation of file attachments between multiple computers
- Mobile Privacy now also with password categories
- Safe creation with more clarity through additional assistance
- Portable Safe improvements

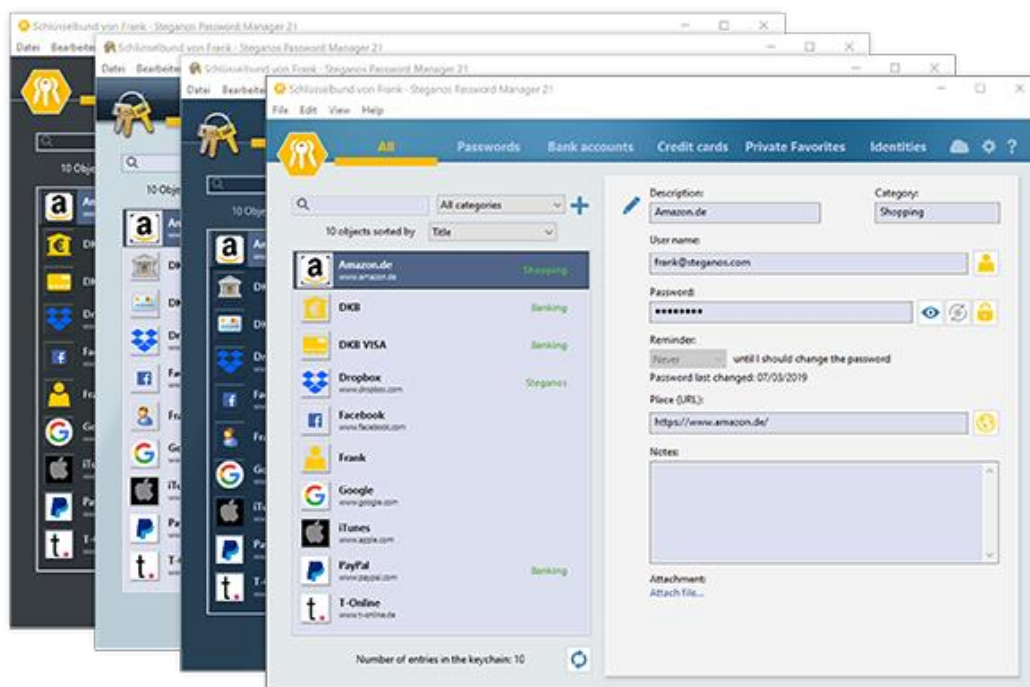

Steganos Privacy Suite 21

Steganos Privacy Suite 21, featuring the security applications Safe 21 and Password Manager 21, has been reliably protecting data and privacy on the PC for decades. The developers at Steganos work constantly on optimisation and improvements. Privacy Suite 21 benefits from extremely accelerated cloud synchronisation, greater Mobile Privacy performance and improvements to the Portable Safe. File attachments can be synchronised between multiple computers. Various interface designs and new optional list views are now available for easy and intuitive use. Password categories are now also available in Mobile Privacy. Added help when creating safes also increases ease of use and clarity.

Proven mechanisms and functions enable sensitive data such as business documents, access data, etc. to be securely encrypted and stored at the touch of a button. This can be to any location on the computer, on the network or in the cloud. Sophisticated brute force protection ensures maximum security. Passwords are automatically created, managed and entered for all online accounts on the PC. Browser data and histories can be deleted with a single mouse click. Full synchronisation is possible between the Mobile Privacy apps and multiple password managers, in real time and on different devices, via OneDrive, Google Drive, Dropbox or MagentaCLOUD.

Steganos Password Manager 21

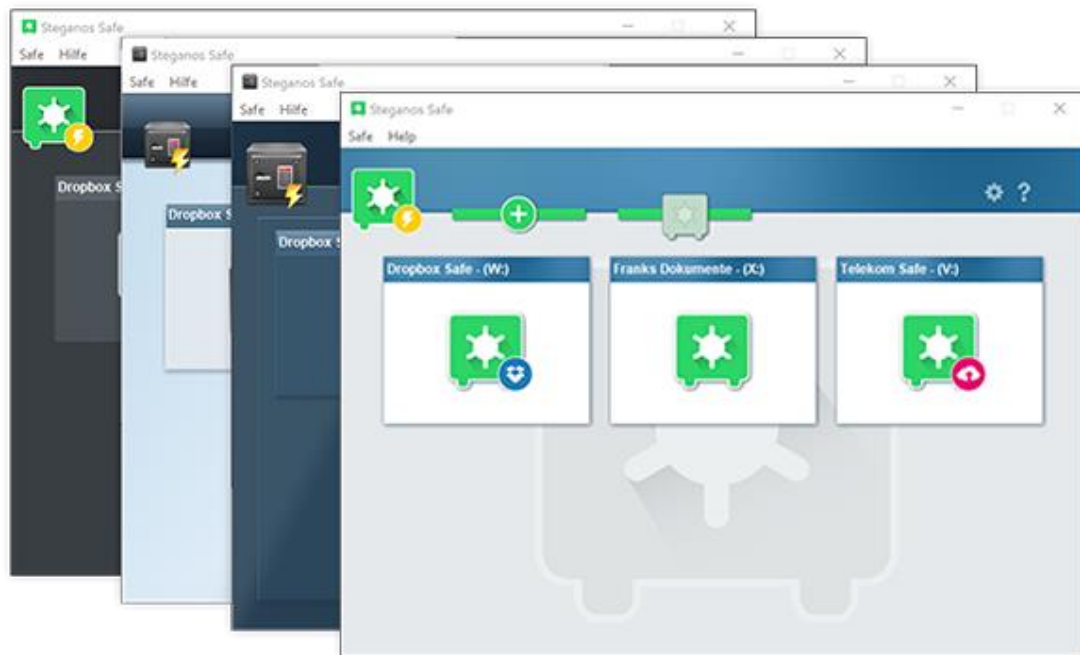

Password Manager 21 uses highly secure AES 256-bit encryption to generate and manage passwords securely on the PC, on mobile devices and in the cloud. The encryption has never been broken since the company was founded. The choice of different interface designs now available and new optional list views for better clarity ensure a good overview all the time. One important innovation is the ability to synchronise file attachments between multiple computers. There is an extraordinary improvement in performance for cloud synchronisation and Mobile Privacy. The latter now includes password categories as well.

Thanks to full synchronisation between the Steganos Privacy apps and Steganos Password Manager 21, strong passwords can be created and managed on the smartphone and any other mobile device and will always be available. Passwords are always encrypted on the computer first and only then transferred to the cloud if required. There are practical browser plug-ins for Chrome and Firefox that can be used to automatically populate and save access data. Access to private favourites is also very quick and easy. Users of Google Chrome benefit from simple password imports. The virtual keyboard prevents keystrokes from being recorded by keyloggers. With the optional character randomiser to protect against mouse click recording, and brute force protection, access passwords are optimally protected.

Additional security for the keychain is achieved through two-factor authentication, using the option of third-party apps such as Authy and Google Authenticator. There is a backup wizard for easy handling of keychains. Additional security is provided through regular reminders to change passwords. Secure access to PINs and passwords with automatic input in the in-app browser while on the move is possible via free apps for iOS and Android. The portable USB version of Password Manager 21 can be used on any computer with an encrypted password list. A helpful print function is available for password lists that are stored in a safe deposit box or with a notary, etc. For reliable protection against hackers and data spies, Steganos Password Manager 21 generates secure passwords and makes managing them easy. This ensures optimal, secure password management.

Steganos Safe 21

When it comes to protecting confidential documents, business records, TAN lists and more, Steganos Safe 21 offers highly professional security features that are intuitive and easy to use. The new, varied and selectable interface designs offer the optimal environment for every user. Also new is the additional help for easier safe creation. There are also improvements to the Portable Safe. The digital safe protects all types of sensitive data at the touch of a button. The latest 384-bit AES-XEX encryption with AES-NI hardware acceleration made in Germany is used for protection.

Safes can be very easily set up on the PC, on the network or in the Cloud via Dropbox, Microsoft OneDrive, Google Drive and MagentaCLOUD. Steganos claims that even secret services cannot compete with the protection of the Safe 21. Once created, safes have a maximum size of 2 TB and grow automatically, saving space on flash drives. The two-factor authentication for safes and keychains ensures increased security. Safes can also be used portably on USB, CD, DVD or Blu-ray. Ideally, an open safe integrates seamlessly into Windows and can be used with any software.

System requirements

Microsoft® Windows® 10, 8 or 7: at least 1 GB RAM (32 & 64 Bit), CD-/DVD-ROM drive, 200MB of storage space and an Internet connection (for updates)

Steganos Mobile Privacy iOS and Android apps are available for free in the App Store or Google Play store.

For Steganos Safe™: Additional storage space is required for the secure drives. The NTFS file system is required for secure drives larger than 4 GB.

For Steganos Portable Safe™: Optional CD/DVD or Blu-ray burner with corresponding software.

Optional, temporary hard drive space of up to 50 GB for Steganos Portable Safe™ packet files. The NTFS file system is required for secure drives larger than 4 GB.

Supported key devices: All devices that Windows recognises as writeable removable media (e.g. USB sticks, memory cards, digital cameras). Key devices not included in delivery.

Prices and availability

Steganos Privacy Suite 21, Steganos Password Manager 21 and Steganos Safe 21 are now available on the Steganos homepage as well as in assorted specialist and online shops. The price for the Steganos Privacy Suite 21 is \$49.99. Steganos Password Manager 21 can be purchased for \$24.99. Steganos Safe 21 is available for \$34.99. All variants can be used on up to 5 PCs at the same time.

In addition, there is a free trial version for each variant that can be used without restriction for up to 30 days.

Meta description
